                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is that of a single chain Fv (scFv) derivative co fantibody 198/AB2, comprising the heavy (VH) and light (VL) chain variable regions of 198/AB2 joined by an artificial, flexible linker peptide. The scFv was obtained by PCR amplification of cDNAs for 198/AB2 WH and VL regions and cloning in vector DARP2. 199/AB2 is an example of anti-human Factor IX (FIX)/activated Factor IX (FIXA) and their derivatives, concluding scFv and CDR3 fragments, have Factor VIIIa (FVIIIa) cofactor cactivity or FIXA activating activity. Administration leads to an increase in the procoagulant activity of FIXA, even in the presence of FVIII or FVIIIa, and in the case of FVIII or FVIIIa, and in the case of FVIII or FVIIIA, and in the case of FVIII or FVIIIA, and in the case of FVIII chibitor patients. The antibodies and derivatives are used in a claimed pharmaceutical composition for treating patients with blood coagulation disorders, especially haemophilia A and haemorrhagic claimed coagulation disorders, especially haemophilia A and haemorrhagic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The present sequence is that of a fusion protein comprising: a PelB CC leader; a single chain Fv (scrv) derivative of antibody 198/B1 CC comprising the heavy (VH) and light (VL) chain variable regions of CC 198/B1 joined by an artificial, flexible linker peptide; a spacer; CC a Myc-tag peptide; a spacer; and a C-terminal fills affinity tail. CC 198/B1 is an example of anti-human Factor IX (FIX)/activated Factor IX (FIXA) antibodies of the invention. Anti-FIX/FIXA antibodies and CC their derivatives, including scFv fragmants, have FVIII a cofactor CC activity or FIXA activating activity. Administration leads to an CC increase in the procoagulant activity of FIXA, even in the presence CC in the absence of FVIII or FVIII or FVIII and inhibitors. This allows for rapid blood coagulation even in the absence of FVIII or FVIII and in the case of FVIII inhibitor CC patients. The antibodies and derivatives are used in a claimed CC pharmaceutical composition for treating patients with blood CC coagulation disorders, especially haemophilia A and haemorrhagic CC diathesis. The scFv-myc-tag fusion was expressed in B. coli. It
                                                                                                                                                                                                                                                                                                             New factor IX/factor IXa antibodies and their derivatives useful for increasing amidolytic activity of factor IXa, and for treating blood coagulation disorders such as haemophilia A and haemorrhagic diathesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Key

increasing amidolytic activity of factor IXa, and for treating blood coagulation disorders such as haemophilia A and haemorrhagic disthesis
```

Example 16; Fig 28; 138pp; English.

The present sequence is that of a bivalent miniantibody comprising CC a PelB leader peptide, the single chain Pv (scPv) fragment of a PelB leader peptide, the single chain Pv (scPv) fragment of cantibody 198/B1 (subclone AB2), an amphipathic helical structure and a c-terminal GHIs tag. The protein was expressed in Scherichia coli from plasmid pZip198ABZ#102 (see AAF30728). Antibody 198/B1 is an example of anti-human Factor IX (FIX) Activated Factor IX (FIX) antibodies of the invention. CC (FIX)/Activated Factor IX (FIX) antibodies have FVIIIa cofactor activity or FIXa activating activity. Administration leads to an increase in the procoagulant activity of FIXa, even in the presence of FVIIIa inhibitors. This allows for rapid blood cogulation even in the absence of FVIII or FVIIIa, and in the case of FVIII inhibitors. The antibodies and derivatives are used in a colaimed pharmaceutical composition for treating patients with blood coagulation disorders, especially haemophilia A and haemorrhagic distinct. The bivalent miniantibody exhibited FVIII-like

Anti-FIX/FIXa antibodies and their derivatives, including scFv fragments, have FVIIIa cofactor activity or FIXa activating activity. Administration leads to an increase in the procagulant cativity of FIXa, even in the presence of FVIIIa inhibitors. This allows for rapid blood coagulation even in the absence of FVIII or FVIIIa, and in the case of FVIII inhibitor pattents. The antibodies and derivatives are used in a claimed pharmaceutical composition for treating pattents with blood coagulation disorders, especially haemophilia A and haemorrhagic diathesis. Sequence

```
The present sequence is that of a single chain Fv (scFv) derivative of antibody 198/A1, comprising the heavy (VH) and light (VL) chain covariable regions of 198/A1 joined by an artificial, flexible linker peptide. The scFv was obtained by PCR amplification of cDNAs for coppide. The scFv was obtained by PCR amplification of cDNAs for peptide. The scFv was obtained by PCR amplification of cDNAs for complete of anti-human Factor IX (FIX)/activated Factor IX (FIX) and VL regions and cloning in vector pDRP2. 198/A1 is an example of anti-human Factor IX (FIX)/activated Factor IX (FIX) antibodies of the invention. Anti-FIX/FIXA and their derivatives, concluding scFv and CDR3 fragments, have Factor VIIIa (FVIIIa) cofactor activity or FIXA activating activity. Administration leads to an increase in the procagulant activity of FIXA, even in the presence of increase in the procagulant activity of FIXA, even in the presence of FVIII or FVIIIA, and in the case of FVIII in the absence of FVIII or FVIIIA, and in the case of FVIII in the absence of FVIII or FVIIIA, and in the case of FVIII composition for treating patients with blood coagulation disorders, especially haemophilia A and haemorrhagic collabeled by a separate of the coagulation disorders, especially haemophilia.
                                                                                                                                                                                                                                                                                                                                                  New factor IX/factor IXa antibodies and their derivatives useful for increasing amidolytic activity of factor IXa, and for treating blood coagulation disorders such as haemophilia A and haemorrhagic diathesis
                                                                                                                                                                                                                                                                                                                                                                                                                            N-PSDB;

                 The invention relates to a novel monoclonal antibody having the identifying characteristics of, or that is a monoclonal antibody 14F3. An antibody of the invention has osteopathic, antirheumatic, antiarthritic, antiinflammatory, cytostatic, antipsoriatic, antidiabetic, and neuroprotective activity. The polynucleotides encoding the antibodies of the invention may have a use in gene therapy. The antibodies and polypeptides are useful for treating or preventing osteopathic diseases, such as rheumatoid arthritis, osteoporosis, metastatic and primary bone
                                                                                                                                                                                                                                                                                                                                         New monoclonal antibody having the characteristics of a monoclonal antibody 14F3, useful for treating or preventing osteopathic diseases, e.g. rheumatoid arthritis, or osteoporosis, and immune diseases e.g. psoriasis, or diabetes -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sweet RW,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is that of a single chain FV (scFV) derivative CC of antibody 193/K2, comprising the heavy (VH) and light (VL) chain CC variable regions of 193/K2 joined by an artificial, flexible linker CC peptide. The scFV was obtained by PCR amplification of cDNAs for CC 193/K2 VH and VL regions and cloning in vector pDAP2. 193/K2 is an example of anti-human Factor IX (FIX)/activated Factor IX (FIXa) artibodies of the invention. Anti-FIX/FIXA and their derivatives, artibodies of the invention. Anti-FIX/FIXA and their derivatives activity or FIXA activating activity. Administration leads to an increase in the proceagulant activity of FIXA, even in the presence of FVIIIa inhibitors. This allows for rapid blood coagulation even in the absence of FVIII or FVIIIa, and in the case of FVIII cinhibitor patients. The antibodies and derivatives are used in a claimed pharmaceutical composition for treating patients with blood coagulation disorders, especially haemophilia A and haemorrhagic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to anti-RAMK monoclonal antibodies which has the identifying characteristics of monoclonal antibody 2A4. The antibody or polypeptide is useful for treating or preventing osteopenic diseases (e.g., rheumatoid arthritis, osteoporosis, metastatic and primary bone cancer, wear debris induced osteolysis or osteoarthritis) or immune diseases (e.g., psoriasis, insulin dependent, diabetes, inflammatory bowel disease or multiple sclerosis). The antibody is also useful for treating and diagnosing conditions mediated by the RANK ligand. The present sequence is mouse antibody 2A4 heavy chain variable region.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          뫊
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         片
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a chimaexic molecule comprising the GD3 (ganglioside antigen) binding domain of antibody MB3.6, with any of 3 variable gene sequences, or the PSMA (prostate-specific membrane antigen) binding domain of antibody 3D8, 4D4 and 3E11, with variable gene sequences, the zeta signalling chain of the T cell receptor and an continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous constructs to engage additional stimulatory and functional properties constructs to engage additional stimulatory and functional properties constructs to engage additional stimulatory and functional properties constructs to engage additional stimulatory and small cell lung cancer. They are particularly useful in disorders including melanoma, neuroendocrine tumours and prostate and small cell lung cancer. The present sequence represents the mouse antibody MB3.6 heavy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

necrosis factor (TNF)-related apoptosis-inducing ligand (TRAII) receptor CC DR5 (located on chromosome 8p21-22). The antibody has apoptosis-inducing CC activity to a cell expressing DR5 in vivo. It is also useful for CC preparing a therapeutic for selective apoptosis of abnormal or CC dysregulated cells, and for inhibiting cell proliferation in a cell, CC preferably a human breast, ovary, colon, haematopoietic, prostate, CC lymphatic, lung, glioma or liver cancer cell. A therapeutic agent may CC also be administered e.g. paclitaxel, taxol or cycloheximide. The CC antibody is used to treat an autoimmune disease, systemic lupus CC erythematosus, Hashimoto's disease, rheumatoid arthritis, CC graft-versus-host disease, Sjogren's syndrome, Chron's disease, syndrome, CC graftous anaemia, Addison disease, scleroderma, Goodpasture's syndrome, CC graft-versus-host disease, insulin-dependent diabetes mellitus, CC allergy, atopic disease, arteriosclerosis, myosathenia gravis, multiple CC sclerosis, Basedow's disease, insulin-dependent diabetes mellitus, CC allergy, atopic disease, arteriosclerosis, myocarditis, cardiomyopathy, CC glomerular nephritis, hypoplastic anaemia, rejection after organ CC transplantation, and numerous malignancies of lung, prostate, liver, CC ovary, lymphatic or breast tissue. This sequence shows one of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel antibody specific for tumour necrosis factor-related apoptosis-inducing ligand, useful for inhibiting cell proliferation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The

                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention describes a novel antibody which recognizes a tumour concerns factor (PNF)-related apoptosis-inducing ligand (PRAIL) receptor DRS (located on chromosome Bp21-22). The antibody has apoptosis-inducing activity to a cell expressing DR5 in vivo. It is also useful for preparing a therapeutic for selective apoptosis of abnormal or dysregulated cells, and for inhibiting cell proliferation in a cell, preferably a human breast, ovary, colon, haematopoietic, prostate, lymphatic, lung, glioma or liver cancer cell. A therapeutic agent may also be administered e.g. paclitaxel, taxol or cycloheximide. The aniso be administered e.g. paclitaxel, taxol or cycloheximide. The aniso be administered e.g. paclitaxel, taxol or cycloheximide of the cantibody is used to treat an autoimmune disease, systemic lupus graft-versus-host disease, sleenoderma, Goodpasture's gyndrome, chron's disease, graft-versus-host disease, sleenoderma, Goodpasture's syndrome, cutoimmune haemolytic anaemia, sterility, myasthenia gravis, multiple solerosis, Basedow's disease, insulin-dependent diabetes mellitus, allerosis, basedow's disease, insulin-dependent diabetes mellitus.
                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                               New antibodies have been developed which are specific for human parathormone related peptides (hPTRP). The antibodies comprise chimeric L and/or H chains, where the C region is of human and L region of mouse, origin. The present sequence represents a specifically claimed region of an antibody of the invention. Host cells, transformed with vectors containing DNA encoding antibodies of the invention, can be used to produce the antibodies. The antibodies may be used to treat hypercalcaemia, especially that due to a malignancy, e.g. cancers of pancreas, lung, throat, larynx, tongue, gum, oesophagus, stomach, liver, breast, kidney, bladder, womb or prostate or malignant lymphoma. They may also be used for treatment of hypophosphaemia such as that due to pathogens or to vitamin D resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New chimeric antibodies against human parathormone related peptide(s) - useful for, e.g. treatment of hypercalcaemia disorders caused by malignant neoplasm(s)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           hypophosphaemia; pathogen; humanised.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Chimeric; antibody; human parathormone related peptide; hPTRP; L chain; H chain; hypercalcaemia; cancer; malignant lymphoma; C hypophosphaemia; pathogen; vitamin D resistance; V region; C re

This substance may be an antagonist to the receptor, or an antibody (preferably monoclonal) or antibody fragment, recognising PTHrP. The antibody is preferably humanised or chimeric. The present invention also describes a humanised antibody prepared by hybridoma 23-57-137-1 (FERM BP-5631). The composition is used for the treatment of cachexia arising in connection with diseases such as cancer, thereby improving the quality of life of the patient. The present sequence represents mouse humanised antibody heavy chain from #23-57-137-1 from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a method of treatment of hypercalcemic crisis. A composition for the treatment of hypercalcemic crisis contains as active component a substance which inhibits the binding of parathyroid hormone related peptide (PTHrP) to its receptor. The inhibitor is used for the treatment of hypercalcemic crisis, such as that associated with

                                                                                                                                                                                                                                                                                                                                                               The specification describes a treatment for dental diseases. The treatment comprises a substance that inhibits binding between parathyroid hormone-associated peptide and its receptor. The present sequence represents a murine protein, which is used in the course of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2001-465459/50.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: CHUGAI SEIYAKU KABUSHIKI KAISHA

TITLE OF INVENTION: Stabilized Antibody Composition and Pharmaceutical Preparation

TITLE OF INVENTION: Injection

PILE REFERENCE: PH-1093-PCT

CURRENT APPLICATION NUMBER: US/10/169,003

CURRENT FILING DATE: 2002-06-26

PRIOR FILING DATE: 2002-06-26

PRIOR APPLICATION NUMBER: JF 11-375203

PRIOR FILING DATE: 1999-12-28
                                                                                                                                                                                                                                                                                                              Patent No. Usavv.
